

SPECIALIZED TOOL SET

For Night Vision Devices

- ❑ Maintenance Procedures by Qualified Operators
- ❑ To be Used Along with Testing Stations
- ❑ Compatible with **Troya's** NVDs

TROYA

Night Vision Devices (NVDs) are specially operated devices, which highly promote the capabilities, output, and survivability of an operative force in a hostile or combative territory. After having been activated in various types of environments, these robust, ruggedized devices still require a delicate, experienced touch when returning from the battlefield, in order to achieve the best productivity in future use.

TROYA's Testing Stations are a derivative of the company's real hands-on experience with the Night Vision world. Due to the company's high expertise level and knowledge of the various technologies and applications in this content world, **TROYA** offers a wide range of Testing Stations, in order to accommodate the quality management and preventative maintenance of NVDs used in field conditions.

- All the Necessary Tools and Jigs for Laboratory Grade Procedures
- Operational Manual Provided for Procedures' Familiarization
- Allows Maintenance of Various NVDs
