

FINGER LIGHT

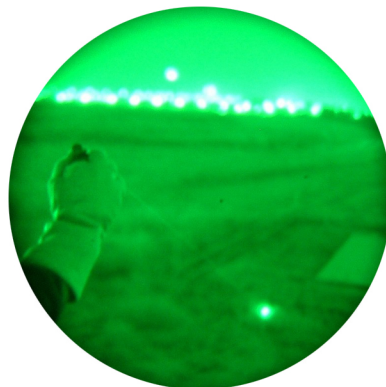

SMALL FLASHLIGHT FOR AVIATORS

The **Finger Light** is a finger mounted ultra-bright LED flash light. It was specially designed for aviators and military professionals, is rugged, powerful, and feather light. The **Finger Light** is very simple to wear on both left and right index finger and is operated single-handedly by the thumb, so the user's other hand remains free. Flipping between the normal and bright light modes is simply done by pressing and holding down the On/Off switch.

Optional models:

- White
- Scuba
- NVG
- UV
- IR
- Visible/ IR Laser

The **Finger Light NVG** model is operated along with Night Vision Devices (NVDs/ NVGs) and was originally designed for Aviators using Gen II/III class A&B Aviator Night Vision imaging Systems (ANVIS).

The **Finger Light SCUBA** is designed to operate in depths of up to 60m/200ft. It was originally designed for military Diving Special Forces. The light source and functions of the **Finger Light SCUBA** are similar to a standard **Finger Light White**.

The **Finger Light UV** produces an Ultra Violet illumination for professional military and security uses. Unlike traditional UV lights, most of the light produced is just outside the visible spectrum. In full darkness, it will cause certain objects to fluoresce at distances of over 20 feet.

The **Finger Light Visible Laser** can be used for a wide range of applications where instant hands-free visible laser pointer is required. From a simple lecture and presentation use to a complex tactical coordination use. The provided laser diode is Red (660nm, 5mW).

The **Finger Light IR Laser** is an Infrared laser pointer for covert operation using night vision devices (NVD), and is only visible when using these devices. It is designed to provide instant hands free covert target pointing; IR laser illumination is achieved using an 850nm, 5mW laser diode.

Other colors and IR wavelengths- Optional.

Operation:
Common cell batteries (LR 44/ SR 44).
8 hrs.- High light level.
20 hrs.- Low light level.
